Scoring Settings

These settings control how submissions to your competition are scored. Please note: you should click the save button at the bottom after completing each box.

Metric

CategorizationAccuracy (Categorization Accuracy) [multiclass-classification] ⬍

Solution File

Upload a csv file containing the competition solution here.

Choose File   No file chosen

Sample Submission File

Upload a file containing the submission format here. This file is used to match the columns of the submission to the expected columns of the solution.

Choose File   No file chosen

Submission Playground

Upload your additional data files here.

These files are given to participants in order to help them create their models. There is a 100GB limit on file size here. If you need to upload larger files, contact a Kaggle admin.

- data documentation
- additional historical data beyond the main set
- maps, photos, graphics

To make it easier for participants to download these, try to limit the number of files to under 20. If you have many files, consider combining similar ones in a zip archive.
